MONTHLY REPORT

25X1

PAR 215

10 July 1964

SUBJECT: Roller Transport Processor (24-Inch)

TASK/PROBLEM

1. Design and fabricate a self-threading photographic processor capable of processing cut sheets up to twenty-four inches wide.

DISCUSSION

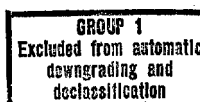

2. During PAR 215 review, 8-11 June 64, processor specifications were revised deleting the requirements for cassette feed and to process continuous strip material. Changes requested will limit processing capability to cut sheet operation eliminating requirement for cassette feed and wind-up stand.

3. General Assembly design and approximately 50% of the subassemblies have been completed. A design study of dryer arrangement to conserve space is underway and progressing satisfactorily.

PLANNED ACTIVITY

4. Activity on the project is increasing as designers become available from the PAR 214 project. Work will be released to the shops for fabrication as detail drawings are completed.
